

Centre Avenue and Herron Avenue – Green Infrastructure Project

PROGRESS AND LOOK-AHEAD:

- Work completed since the last update includes installation of the landscape edging, as well as the trench drain along Centre Avenue. Also, all engineered soils have been installed except for one small section where construction materials are being stockpiled currently.
- During the next two weeks, the Contractor intends to plant 5,700 bulbs of one particular plant species, weather permitting, with plans that they will bloom in the Spring.
- Due to the likelihood of inclement weather, one catch basin tie-in, final road restoration, permeable brick pavers, and final landscaping will not be completed this season. This work, including most plants, shrubs, trees, and mulch, will be installed in the Spring of 2018.
- All trees, grasses, shrubs, and perennials will be provided by the Contractor, followed by the Western Pennsylvania Conservancy (WPC) and the contractor working together to install the plants. WPC has generated substantial interest from volunteer groups that will be assisting with this installation in the Spring.
- Progress meetings with the project team continue regularly.
- The project is approximately 80% complete.
- The anticipated project completion date is June 2018, weather permitting.
