East Liberty & Larimer, East End, District 9 — The Negley Run Blvd bike lanes were originally installed in 2014. However a lack of bike lane protection leaves cyclists exposed to dangerous, high-speed motor vehicle traffic. There have been 64 crashes on this route in the past 5 years, according to PennDOT, several of which have been attributed to aggressive driving and included a bicyclist.

The Negley Run Blvd bike lanes will be upgraded to the standard of All Ages and Abilities while protecting cyclists. A physically protected two-way cycle track on the outbound travel lane will be added. This keeps cyclists safe and separated from high speed motor vehicle traffic. This corridor also connects to the East Liberty Blvd bike lanes as well as the Washington Blvd Trail under construction currently. The Washington Blvd Trail will provide bicycle and pedestrian access to the Bud Harris Cycling Track and parts of Highland Park.
