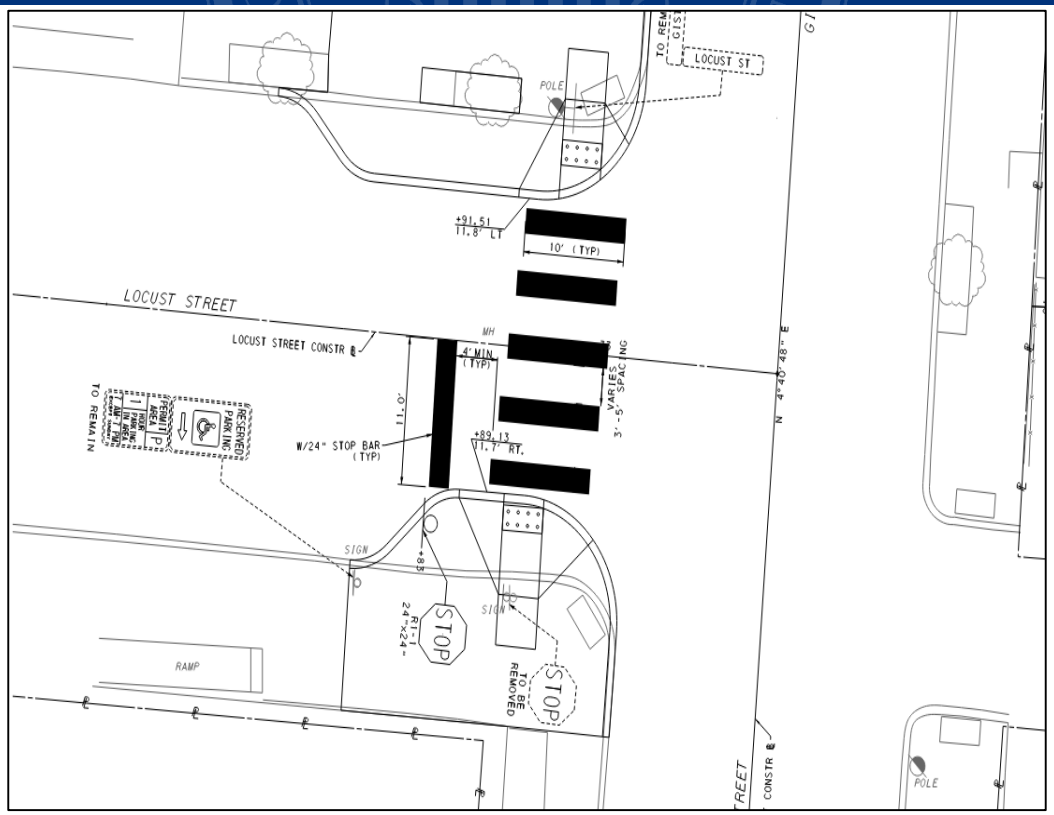
Locust Street Improvements



Revised Intersection Detail

UPDATE To Locust Street Bumpout Project

Sidewalk repairs, bump outs, ADA ramp replacements, and pedestrian crossings markings are being installed on Locust Street from Marion Street to Gist Street as apart of offsite mitigations for the UPMC Mercy Vision Institute.

DOMI Permit DOMI-OP-2022-11272 was adjusted on 10/20/22 to request of residents of the neighborhood.

- Trees existing at the Northwest corner of the intersection will be preserved during reconstruction.
- The Southwest bump out will be altered to preserve an existing handicap parking space.
- Bump out radii have been designed to allow trucks to turn from Locust to Gist.

Residents requested the opportunity to include artistic elements to the remaining bump outs in the project area. UPMC is working with Uptown Partners to provide planters at bump outs to beautify the area.

Construction of the Gist Street bump out will occur within the next several weeks, depended on contractor availability. Residents will see “no parking” signs placed 48 hours in advance of construction.
