Downtown – District 6

Smithfield Street is one of the most significant streets in Downtown Pittsburgh. This project will consist of full depth reconstruction of the street, curb, and sidewalk between Forbes Ave and Sixth Ave. The street was historically blockstone with trolley tracks, which must be removed. The corridor currently accommodates a variety of modes, including a combined bus/bike only lane and a hotel valet zone. This project will include streetscaping aspects and difficult MPT.

Currently, the recommendation for the design consultant is being written for submission to DOMI leadership and PennDOT.

Smithfield Street – Phase 1
