Fallowfield Avenue Landslide

Beechview / 19th Ward

The western sidewalk along Fallowfield Avenue has slid causing it to become impassible. A portion of the roadway has also been affected, between Broadway and Hampshire Avenues. The geotechnical investigation has been completed and a design has been authorized to correct the situation. Currently, this is causing an impact to the vehicular & pedestrian traffic through this neighborhood. On January 22, 2020, Council approved legislation to allow the block stone surface to be reconstructed as a concrete roadway. Design is proceeding in accordance with this.

Project Timeline

November, 2019 – Geotechnical Investigation completed
July, 2019 – Design authorized
